CAREER OBJECTIVE

To utilize my technical skills and engineering
expertise in a dynamic environment,Contributing to impactful infrastructure project that prioritize sustainability and innovation,
while growing my professional capabilities.

TECHNICAL SKILL

Programming: Python, Java, C / C++
Web basics: HTML, CSS, JavaScript
Databases: SQL, MySQL

AREA OF INTEREST

- Problem sloving
- Software development
- Database systems

Language

- English
- Tamil

Soft Skills

- Creative Thinking 80%
- Communication 85%

Experience

I am a dedicated and motivated student currently pursuing the II M.Sc. Software Systems program. I have developed foundational programming skills in C, Java, Python, C++, and HTML. My approach to work is defined by my core strengths in Teamwork and Smart Work , coupled with a genuine interest in Problem Solving. Having gained practical exposure through an in-plant training at Bharat Heavy Electricals Limited (BHEL), Trichy , I am actively seeking opportunities to utilize my technical skills in challenging software development projects, where I can contribute effectively to organizational goals and continuously grow as a professional

Leadership

Team leader in Hackathon project

Project

1. AI Detects Violence in CCTV

This system uses Computer Vision and Deep Learning (like CNNs and RNNs) to analyze live video feeds from CCTV cameras in real-time.

It is trained to identify complex patterns of movement, aggressive gestures, and suspicious behaviors that are indicative of a physical altercation or violent act.

Upon detection, the system automatically triggers an immediate alert to security personnel or authorities, enabling a faster response time than manual monitoring.
